                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the 5' sequence of the clone insert Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de, sequenced by Qiagen (Hilden/Germann) within the cDNA sequencing consortium of the German Genome Project. This clone (DKFZp469H1132) is available at the RZPD in Berlin. Please contact the RZDD: Ressourcenzentrum, Heubnerweg 6, 14059 Berlin.-Charlottenburg, GERWANY; Email: clone@rzpd.de Further information about the clone and the sequencing project is available at http://mips.gsf.de/projects/cdna/.

Base Calling/Quality Scores: PHRED from Washington University
Genome Center.

Vector Trimming: Cross_match from Washington University Genome
Center PHRAP suite. Low quality bases (Phred score < 20) were

trimmed from both ends of the sequence by an in-house script.

This sequence is vector free and at least 200 bp in length. Funded
by PHS grant # RO1 NS045264, 'Songbird Neurogenomics Initiative.'

                                          Vector Trimming: Cross match from Washington University Genome Center PHRAP suite. Low quality bases (Phred score < 20) were trimmed from both ends of the sequence by an in-house script.

This sequence is vector free and at least 200 bp in length. Funded by PHS grant # RO1 NSO45264, 'Songbird Neurogenomics Initiative.' PCR PRIMERS

Genome Center:

Vector Trimming: Cross match from Washington University Genome Center PHRAP suite. Low quality bases (Phred score < 20) were trimmed from both ends of the sequence by an in-house script.

This sequence is vector free and at least 200 bp in length. Funded by PHS grant # RO1 NSO45264, 'Songbird Neurogenomics Initiative.' PCR PRIMETS

Low quality bases (Phred score < 20) were trimmed from both ends of the sequence by an in-house script. This sequence is vector free and at least 200 bp in length. Funded by PHS grant # RO1 NSO45264, 'Songbird Neurogenomics Initiative.'

/clone lib="NHH BMAP_EXO"
/note="Organ: Brain"-Vector: pYX- Asc; Site_1: EcoR I;
/site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is ACCGAGACAG. This library was created for the University
lowa Brain Anatomy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

/ note="Organ: brain; Vector: pBluescript II KS(+); Site_1:
ECORI; Site_2: Not!; This normalized library was
constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded
was blunted, ligated to NotI adapters, digested with
ECORI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pBluescript (KA+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
